

# GO WIRELESS

Reduce your upfront costs and long-term maintenance costs by switching to a security system that uses a Point to Point (PTP) or Point to Multi-Point (PTMP) wireless network.

The cost of trenching, laying conduit, and maintaining wire across multiple buildings spread over a large campus can be significant. With wireless PTP or PTMP technology, we can bundle all of your cameras, doors, and intercoms into one network.

## NO TRENCHES, NO WIRES, NO CONDUIT

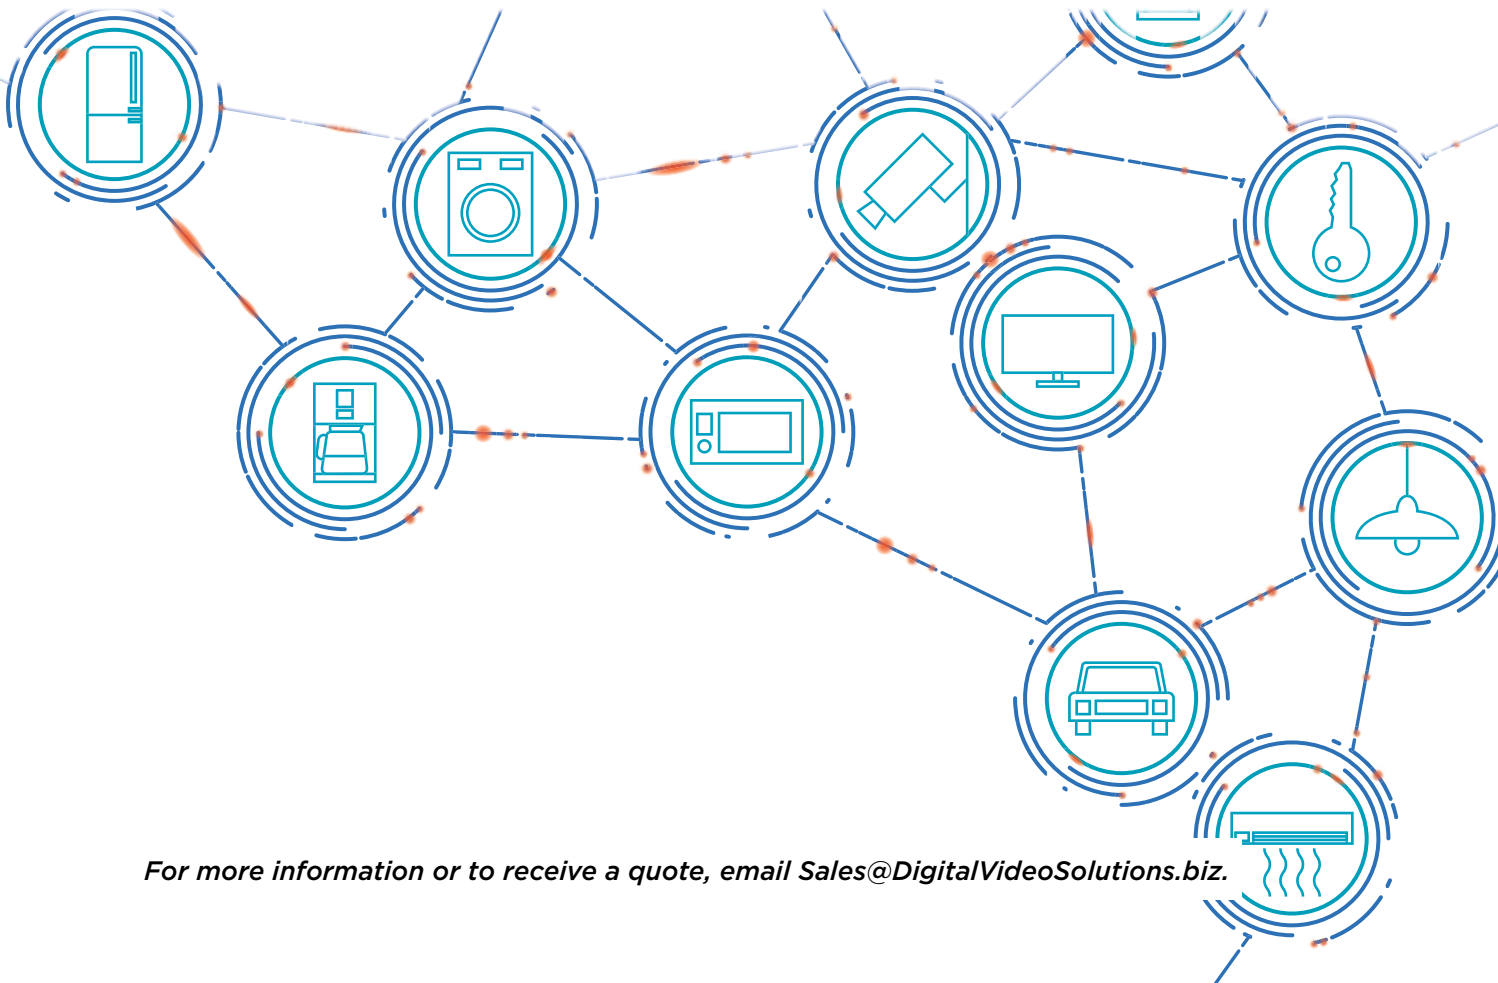

Your upfront costs are dramatically reduced with a wireless network.

## REDUCE YOUR INTERNET SERVICE COST

Instead of separate internet service points for each building, your entire security network can run off a single internet service point, depending on the bandwidth requirements of the edge devices and the capacity of each internet gateway. This substantially reduces your costs.

## FEWER SERVICE CALLS

Wire and conduit can be damaged either accidentally or intentionally. A wireless network is less vulnerable to vandalism, crime, or errant landscapers.
